

Micro-Distilling Apparatus, Schlee

Micro-distilling apparatus

This compact distilling unit comprises an 100 ml round flask, a distillation head with condensing finger, and a receiving spider for three 50 ml flasks. The distillation flask is heated by means of an infinitely adjustable heater plate (500 W) with safety rail and aluminum block for even distribution of heat. The measuring range of the distillation thermometer is from 0 to +250°C. Thanks to the lateral Luer lock, the creation of vacuum-capability is possible as well. With compact rack with room for storage of the glass elements in the top sector for easy and safe handling in the laboratory. Spare parts and accessories are available on request!

Article	Order No.
